título:

“Trying to prove stability”

**Abstract:** We can define the plethysm of two Schur symmetric functions as a new operation, which is more complicated and interesting than the Kronecker product. We will discuss this joint with other technic, Vertex operators, that we can use to study the stability problems that appear in different contexts.

**Fecha:** Martes, 21 de enero de 2014  
**Hora:** 11:00 horas  
**Lugar:** Seminario D, Edificio de Matemáticas
